

Md Nahid Hasan

Backend Developer (Django) — ML Engineer

nahid2887@gmail.com — +880 1726 930828 — Dhaka, Bangladesh

github.com/nahid2887 — linkedin.com/in/nahid2887

Overview

Backend developer and machine learning engineer with experience building production-ready Django/DRF APIs, AI-powered features, and scalable SaaS platforms, with a strong focus on code quality, performance, and collaboration.

Education

Bangladesh University of Business & Technology (BUBT), Dhaka *March 2024*
B.Sc. in Computer Science **CGPA: 3.58/4.00**
Major in Artificial Intelligence

Dr. Kazi Motahar Hossain College *2018*
Higher Secondary Certificate (Science)

Skills

- **Backend:** Django, Django REST Framework, RESTful API design, Celery, WebSockets
- **Databases:** PostgreSQL, MySQL
- **AI/ML:** Python, Computer Vision, NLP, LangChain, RAG pipelines
- **DevOps/Tools:** Docker, Git, Linux
- **Payment/Integration:** Stripe, Plaid, OpenAI API

Professional Experience

Junior Backend Developer & DevOps

Join Venture AI (JVAI) — Dhaka, Bangladesh June 2025 – Present

- Developed and maintained robust, high-performance RESTful APIs using **Django** and **Django REST Framework** for core application functionalities.
- Implemented and managed essential **DevOps** practices, including application deployment, monitoring, and containerization with **Docker**, ensuring high availability and scalability.
- Collaborated with front-end teams to integrate new features, optimize existing backend services, and ensure seamless data flow across the platform.

Backend Developer (Intern)

Zero_Byte — Jashore, Bangladesh January 2025 – March 2025

- Assisted senior developers in the design, implementation, and testing of new backend features using Python and Django.
- Gained practical experience with database management (PostgreSQL/MySQL) and version control

workflows using Git.

Technical Projects

• ClaimMate.ai – Insurance Claim Management Platform

Backend Developer – Django — PostgreSQL

Developed the backend using Django, DRF, and PostgreSQL, including secure authentication, claim submission, document handling, Proof of Loss generation, and claim timeline management. Built AI-powered features for automated claim letter generation, policy document summarization, and EUO preparation, and integrated Stripe for payments, subscriptions, and admin controls.

• Preqlly AI Website – Mortgage Pre-Approval Platform

Backend Developer – Django/DRF — PostgreSQL

Implemented RESTful APIs for OpenAI GPT integration, Plaid-based financial verification, smart form processing, dynamic PDF generation, and secure authentication workflows. Collaborated with React/Next.js frontend teams, optimized backend performance, and supported deployment and scalable architecture for future mobile app expansion.

• Dynamic Social Calendar App

Backend Developer – Django/DRF — Realtime APIs

Built secure REST APIs for user accounts, event creation, availability tracking, invitations, RSVPs, ride coordination, and short-term babysitting requests using Django, DRF, and PostgreSQL. Implemented WebSocket-based real-time notifications and messaging, admin moderation tools, and scalable backend architecture for iOS and Android mobile apps.

• AI-Based Nurse Lens App

Backend Developer – Medical AI — HIPAA-focused

Built secure, scalable REST APIs for patient case management, wound image uploads, multi-visit history, clinical notes, and role-based access using Django, DRF, and PostgreSQL. Implemented backend logic for AI-driven wound analysis with Python, LangChain, and GPT-based RAG pipelines, including multi-tenant organization support, encrypted storage, and audit logging for compliance.
